| Project Name | Web Phishing Detection |
| Maximum Marks | 2 Marks |

Proposed Solution Template:

Project team shall fill the following information in proposed solution template.

| S.No. | Parameter | Description |
|-------|------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. | Problem Statement (Problem to be solved) | <ul style="list-style-type: none">• Web phishing aims to steal private information, such as usernames, passwords, and credit card details, by way of impersonating a legitimate entity.• It will lead to information disclosure and property damage.• Large organizations may get trapped in different kinds of scams. |
| 2. | Idea / Solution description | In order to detect and predict e-banking phishing websites, we proposed an intelligent, flexible and effective system that is based on using classification algorithms. We implemented classification algorithms and techniques to extract the phishing datasets criteria to classify their legitimacy. |
| 3. | Novelty / Uniqueness | The e-banking phishing website can be detected based on some important characteristics like URL and domain identity, and security and encryption criteria in the final phishing detection rate. Once a user makes a transaction online when he makes payment through an e-banking website our system will use a data mining algorithm to detect whether the e-banking website is a phishing website or not. |

| | | |
|----|---------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4. | Social Impact / Customer Satisfaction | The feasibility of implementing this idea is moderate neither easy nor tough because the system needs to satisfy the basic requirements of the customer as well as it should act as a bridge towards achieving high accuracy on |
| | | predicting and analysing the detected websites or files to protect our customer to the fullest. |
| 5. | Business Model (Revenue Model) | People buy subscription annually, to protect their files both locally and at remote location with the help of our cloud integrated flask app for web phishing detection. |
| 6. | Scalability of the Solution | By implementing this system, the people can efficiently and effectively to gain knowledge about the web phishing techniques and ways to eradicate them by detection . This system can also be integrated with the future technologies |
